TennesseeView 2024 - 2025 ACTIVITIES

TennesseeView (TNView) is committed to advancing Earth observation research, education, outreach, and workforce development across the state of Tennessee. In Fiscal Year 2024 (GY24), TNView undertook several impactful activities that strengthened the state's geospatial capacity and community engagement:

- **Student Remote Sensing Contest:** In partnership with the Tennessee Geographic Information Council (TNGIC), TNView co-hosted a student contest at the annual TNGIC Conference. This event provided students with a platform to showcase their remote sensing and GIS skills while connecting with professionals from across the state.
- **Student Fellowships:** Six student fellowships were awarded—three to graduate students and three to undergraduates—to support research in remote sensing, cloud computing, and GeoAI. These fellowships encouraged students to pursue advanced study and practical applications of geospatial technologies.
- **Training Workshop:** TNView organized a virtual workshop titled "[Unlocking the Power of GeoAI with Python](#)," which attracted more than 200 participants via Zoom. The recorded session, available on YouTube, has since garnered over 4,700 views, extending the workshop's reach to a broader audience.
- **Development of Educational Resources:** A new book, [Introduction to GIS Programming](#), was published and quickly became a best-seller on [Amazon](#) and [Leanpub](#). In addition, TNView produced a comprehensive [GeoAI Tutorial Series](#) consisting of 30 high-quality instructional videos. The series covers topics such as remote sensing data preparation, image segmentation, and deep learning workflows, and has accumulated more than 32,000 views on YouTube—serving as a valuable resource for students, educators, and professionals seeking to integrate GeoAI into their work.

TNView Remote Sensing Contest Winners:

Ella Saunders, Justin Medley, Joshua Loiacono, Julia Prins

Dr. Wu published a new book: [Introduction to GIS Programming](#)

TennesseeView is a member of the AmericaView Consortium, a nationally coordinated network of academic, agency, non-profit, and industry partners and cooperators that share the vision of promoting and supporting the use of remote sensing data and technology within each state. AmericaView is funded by USGS grant agreement G23AP00683.

BENEFITS TO TENNESSEE

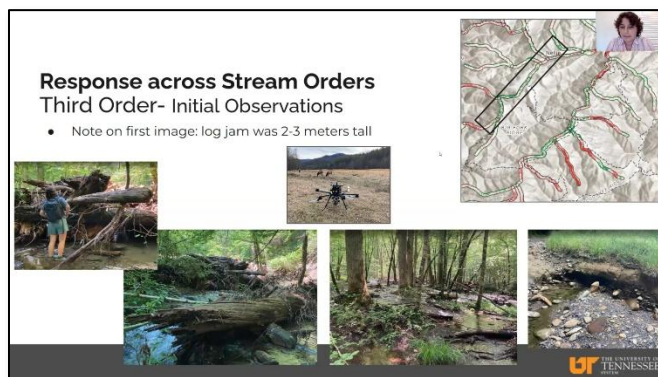

The activities of TNView provide significant benefits to the state of Tennessee by expanding access to cutting-edge learning resources in cloud-based remote sensing and GeoAI. Through its educational programs and open-access materials, TNView empowers students, educators, and professionals to harness the power of geospatial artificial intelligence for real-world problem solving.

TNView's growing library of GeoAI tutorials, training videos, and online workshops provides accessible, self-paced learning opportunities that can be seamlessly incorporated into undergraduate and graduate curricula across Tennessee. These resources help institutions modernize their geospatial education programs and prepare students for the rapidly evolving field of AI-driven geospatial analysis.

Recognizing the importance of cultivating the next generation of geospatial professionals, TNView awarded six student fellowships—three at the graduate level and three at the undergraduate level—to support research in GeoAI, remote sensing, and cloud computing. These fellowships not only enrich students' educational experiences but also contribute to developing a highly skilled geospatial workforce capable of supporting Tennessee's environmental management, infrastructure planning, and data science innovation.
